

How to Measure Your Chair

Before you order your cover, you will need to carefully measure the chair it is meant to cover. Our guide below will walk you through the steps to correctly and accurately measure your chair to ensure you get the best fit.

Width

Measure the widest side of the chair from left to right.

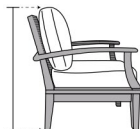

*Start measurement at the leg base or arms, whichever is the widest point.

Depth

Measure the deepest side, adjacent to the width, from the back to front of the chair.

*Start measurement at the top or bottom of the chair back if the furniture has a curvature design.

Height

Measure from the ground to the top of the chair.

*We recommend a cover 1-2 inches shorter than the furniture for breathability.

Please round up your dimensions to the nearest inch.

Please note: Published dimensions for patio furniture cover styles refer to furniture dimensions

Additional Tips

Each cover is intuitively designed to allow for hem-to-ground space for necessary air circulation

If no outdoor patio chair cover with your exact dimensions exists, choose one that is slightly larger in width and depth.

Try our stacking chair cover if you have multiples that stack, nest or have unique dimensions.
